Cosine Similarity Temporal Analysis - Overview

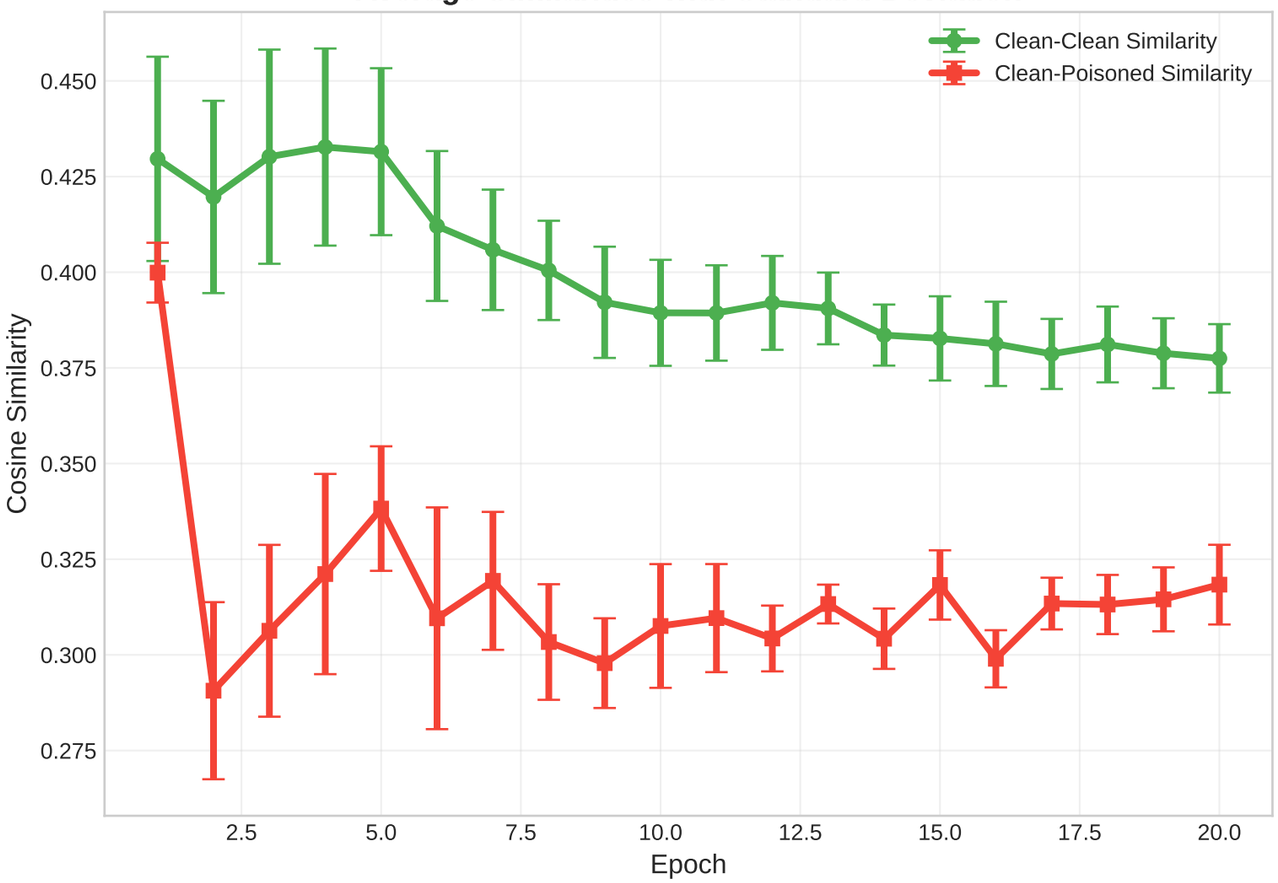

Discrimination Power Evolution

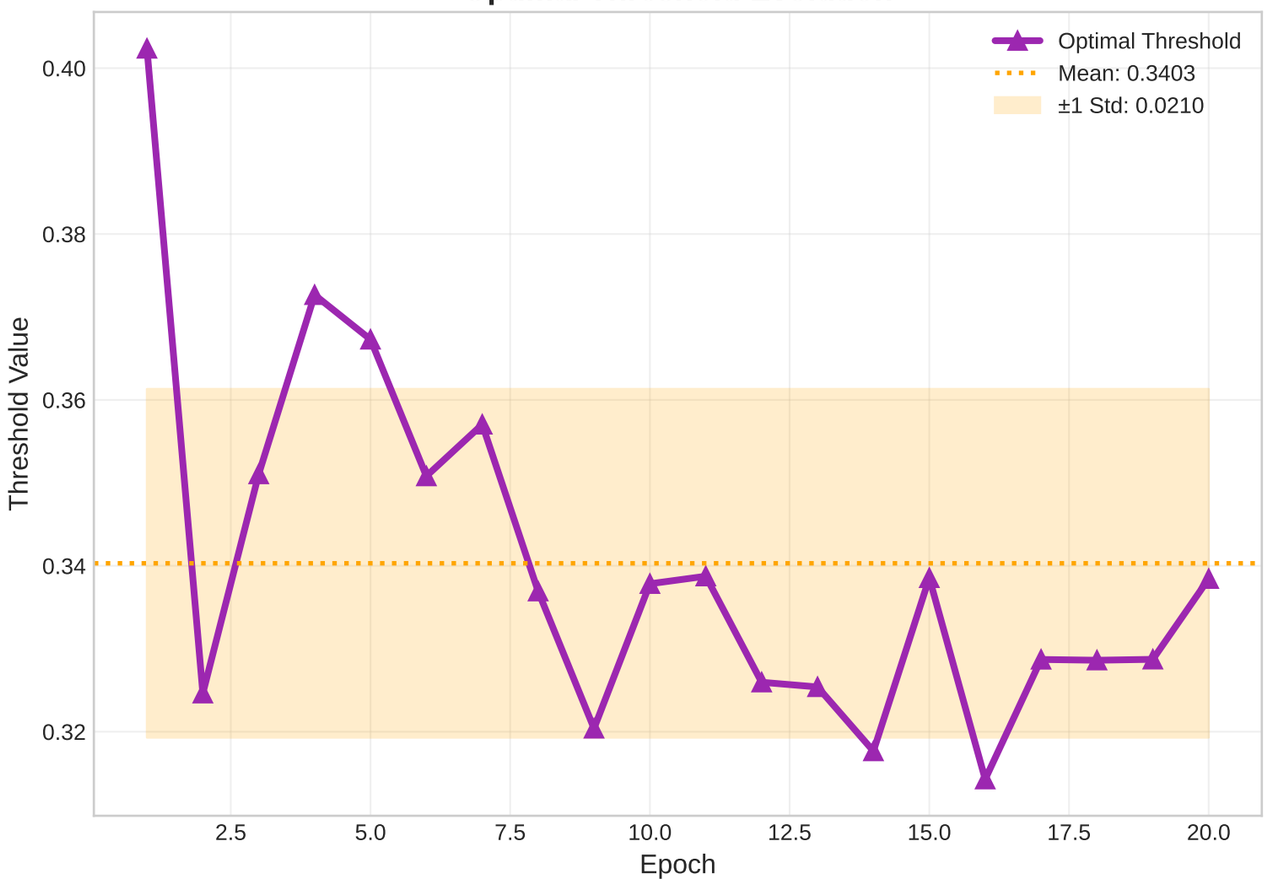

Detection Accuracy Evolution

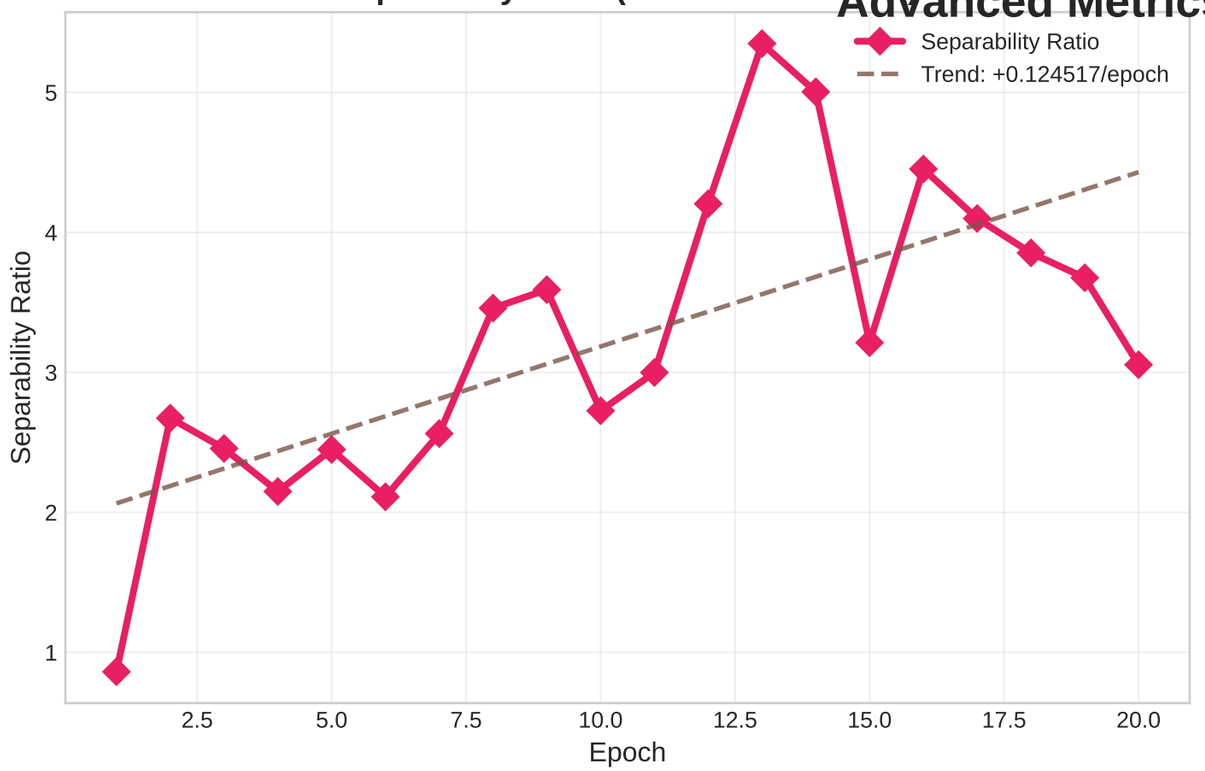

Average Similarities with Standard Deviation

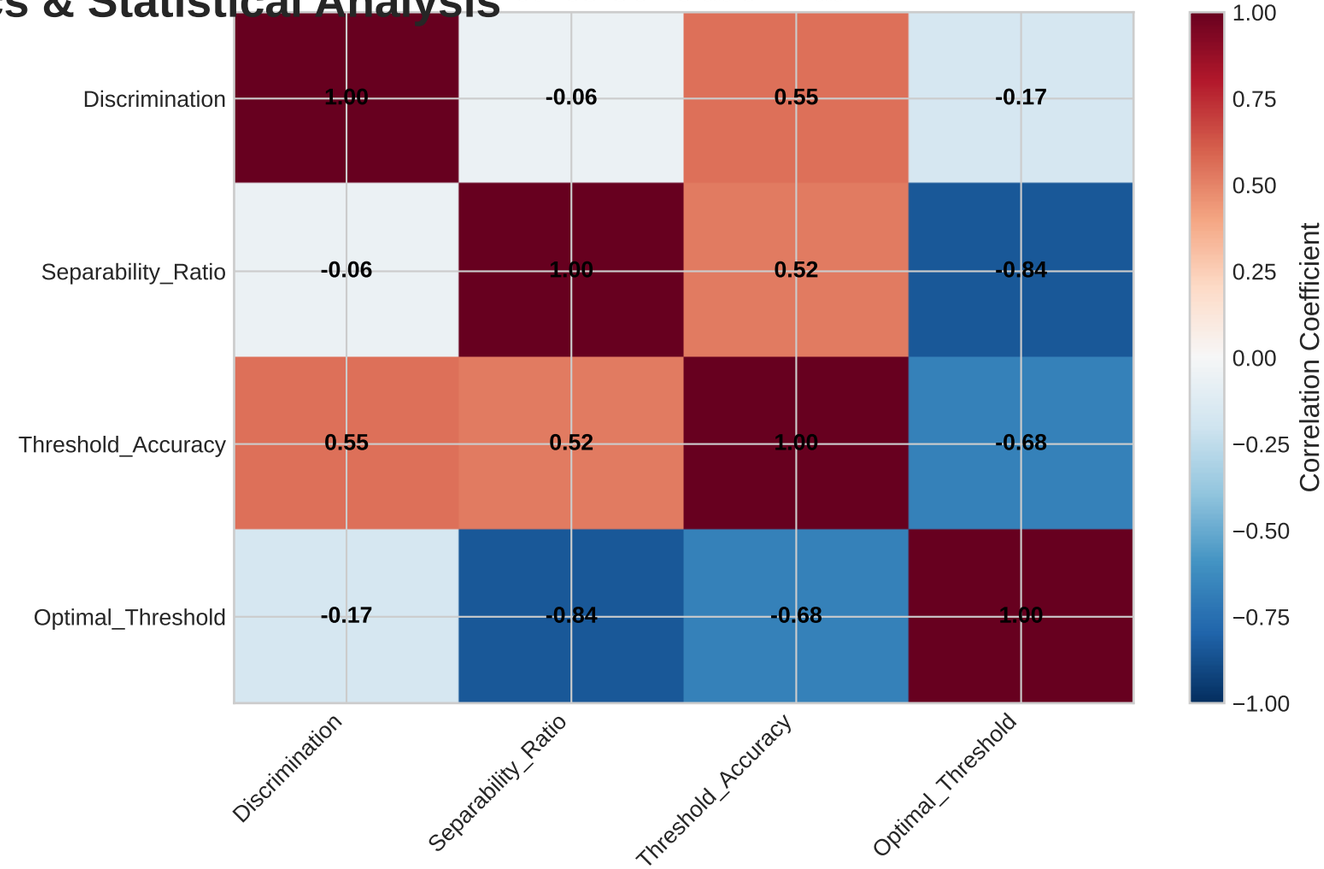

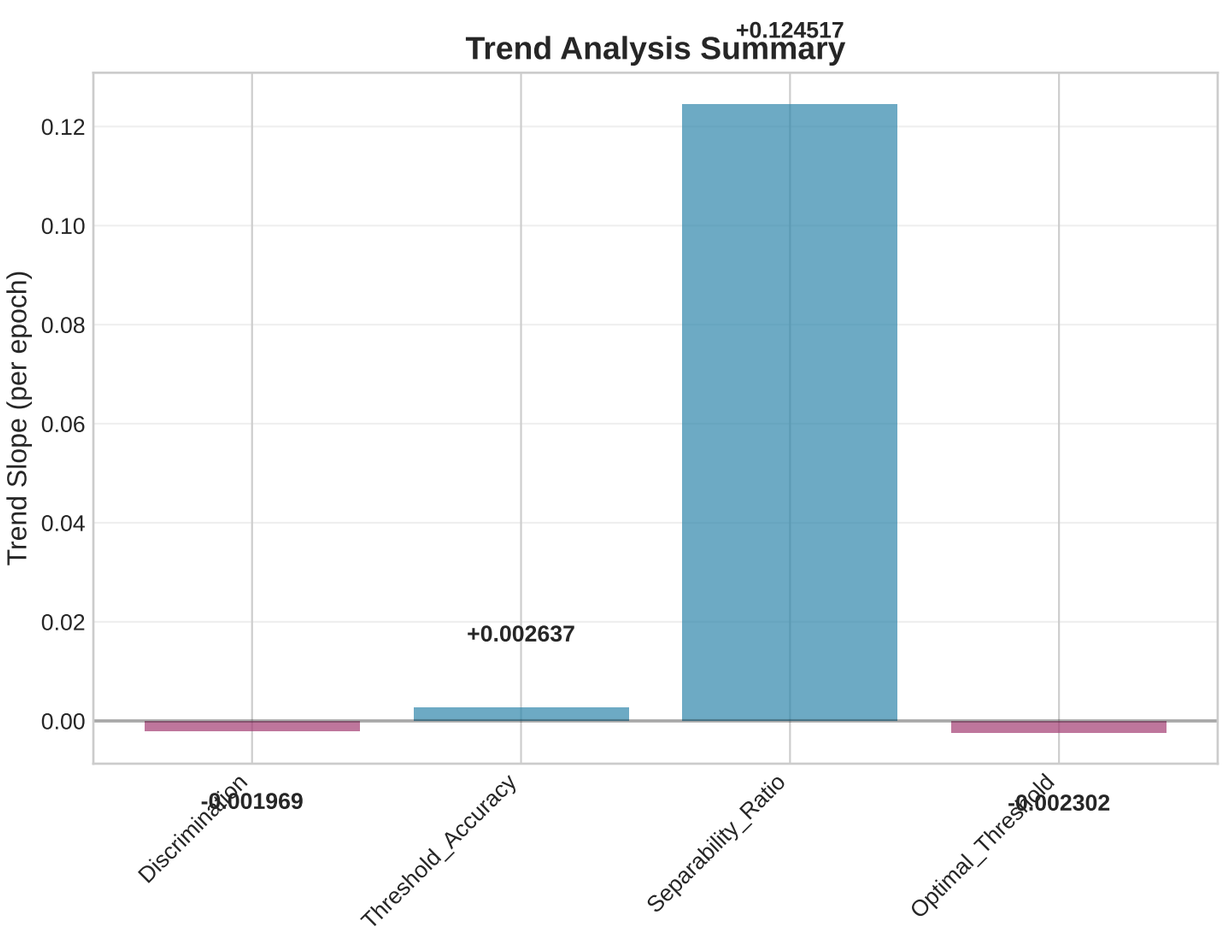

Optimal Threshold Evolution

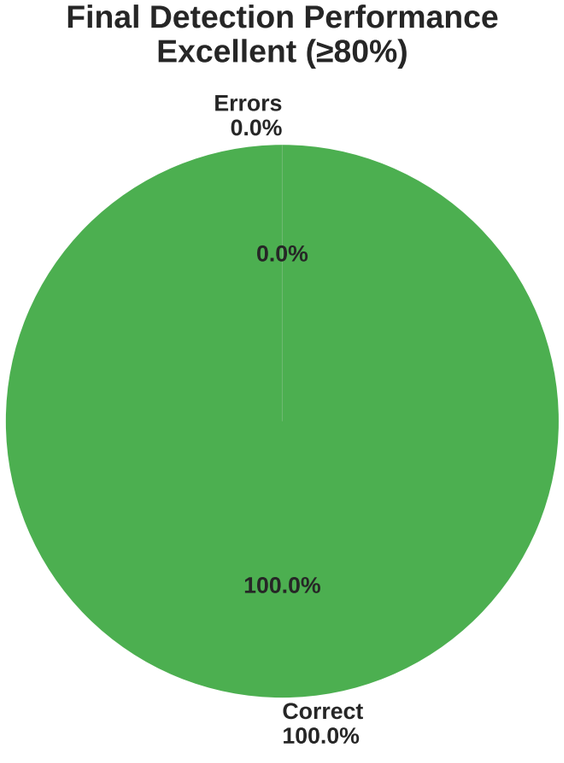

Advanced Metrics & Statistical Analysis

Summary Statistics & Recommendations

Summary Statistics Table

Statistic	Discrimination	Threshold_Accuracy	Separability_Ratio	Optimal_Threshold
MEAN	0.083865	99.08%	3.247225	0.340306
STD	0.023106	4.13%	1.074307	0.021551
MIN	0.029739	81.54%	0.861880	0.314272
MAX	0.129040	100.00%	5.348616	0.402364

```
FINAL RECOMMENDATIONS & CONFIGURATION

Overall Effectiveness:  EXCELLENT - Highly recommended for production

 Recommended Configuration:
   • similarity_method = 'cosine_original'
   • similarity_threshold = 0.338441
   • expected_accuracy = 0.9908 (99.1%)
   • discrimination_power = 0.083865

 Threshold Stability:  POOR - Threshold is unstable
   • Mean Threshold: 0.340306
   • Standard Deviation: 0.021551
   • Coefficient of Variation: 0.063330

 Deployment Guidance:
   • High accuracy - can be primary detection method
   • Consider adaptive threshold based on recent epochs
   • Total epochs analyzed: 20
   • Success rate: 20/20 epochs (100.0%)
```
